Is there any way to convert pdf to html or any type of image using c# ? I have tried PDFReader.dll and itextsharp.dll, but I couldn't figure out. Thanks in advance.

c# html image pdf

How about the open source suite [ImageMagick](#). It has interfaces for a good number of programming languages among which is C#. ImageMagick can read and write images in various formats.

A C# application wrapper of ImageMagick core is available [here](#).

An example on converting a PDF file using ImageMagick C# interface is given [here](#).

Have you looked into the following:

<http://www.sautinsoft.com/products/pdf-focus/convert-pdf-to-html-in-dotnet.php>

Looks pretty straightforward:

```
SautinSoft.PdfFocus f = new SautinSoft.PdfFocus();  
f.OpenPdf(@"c:\Odyssey.pdf");  
f.ToHtml(@"c:\Odyssey.html");
```

PDF Focus .Net generates HTML5 document with CSS and images. Another point of interest is that it can generate HTML documents with images encoded by base-64 algorithm. Given this fact, it's possible to convert PDF to HTML completely in memory.

Thank for reply, I used trial version of SautinSoft, it converts only first 3 pages, If I could convert pdf splited into small documents with 3 pages, it will also work – [lskuhi](#) Feb 20, 2014 at 13:36
